IT MANAGER (M/F) - SOLUTION AND APPLICATION MANAGER, ENGINEERING SERVICES

JOB NUMBER: IT 00001043

IT in Procter & Gamble, this is where business, innovation and technology come together to create competitive advantage. Our mission is to deliver IT to help P&G win with consumers all over the world. We are a team of IT professionals who apply IT mastery to deliver game-changing, technology-driven business models and capabilities.

As **IT Manager** for Engineering Services, you will be responsible for defining and leading the innovation, and execution of key solutions and applications of our digitization masterplan, as well as integrations between them. That will include:

- Identifying innovation opportunities and developing business cases, then driving operational proof of concept to confirm viability via fast protocycling and Minimal Viable Products
- Assessing new business needs against current capabilities and identifying requirements and associated value where functional gaps are identified
- Partnering with our business experts and technology suppliers to discover, design, build and qualify new capabilities required to deliver the masterplan

We are looking for:

- Recent graduates with a passion for business and technology, with experience working on IT projects, and eager to develop a career in leveraging IT to transform the business.
- Good understanding of IT Innovation methodologies and tools: Rapid protocycling, Minimal Viable Products, Microservices, Cloud integrations/iPaaS, API Management, knowledge and experience in managing application development.
- Ability to execute complex projects including clear communication of status to relevant parties.
- Desire to build deep technical skills and expertise to deliver sustainable applications and capabilities
- Strong leadership and communication skills
